PwC Smart Tax Suite

PwC Switzerland offers companies a toolkit specifically designed for the needs of multinational groups with decentral tax functions. All Smart Tax Suite products are designed following a simple and lean design approach using state of the art web technology.

PwC Smart Collaboration

A process management and document repository solution

Unknown filing deadlines, the struggle of finding the latest version of a document or missed emails are yesterday's news. PwC Smart Collaboration is a webbased tax process management tool. Use built-in functions such as customized workflows, standardized processes and possibility to separate responsibilities and set-up of reminders, document repository and many more – boosting work efficiency by facilitating challenging collaborations.

PwC Smart Survey

A questionnaire tool to collect non-system data

PwC Smart Survey allows to gain insights from entities across the globe in a collaborative manner. The tool enhances efficiency and effectiveness when gathering insights compared to traditional ways such as interviews. The solution uses the concept of social media platforms, combined with strict access management. The ability to set up own and individualised surveys by offering a wide range of question types and decision trees, guarantees a successful fact or structured information-gathering project.

Smart Tax Risks & Controls (“TRaC”)

A tax riskmanagement and tracking solution

The web-based risk management tool provides management functions with a simple and operational approach to manage tax risks and opportunities with clear visualisations. This further allows to use this data for reports to relevant stakeholders and to prioritize mitigation and resources in a hectic and complex tax world.

Your benefits

Our modular solution provides you with all functionality for your tax function of the future!

- User-friendly for both power and end-users
- Proven technology combined with tax expertise
- Quick to deploy and populate
- Client-managed, i.e. no dependency on provider once set-up
